

A B S T R A C T

5 The object of the invention is to provide a camera that
provides an observation device comprising a housing, an optical lens with
a field of view, which is accommodated within the housing, said housing
comprising an outer dome which is transparent, at least in the field of
view of the lens, for protecting the lens, and an inner dome disposed
10 within the outer dome. The observation device having the above
construction is resistant to impact by an object with a maximum impact
energy of a first magnitude, whilst the observation device not fitted
with an inner dome is resistant to impact by said object with a maximum
impact energy of a second magnitude. The proportion between the first
15 magnitude and the second magnitude is at least 1.1.
